ABOUT ORIGNAGTA

Custom ecommerce and mobile app platform built on Flutter, Rust, and PostgreSQL. Service payments are handled by Stripe Checkout in CAD. Cross-platform from day one: web, iOS, Android, and desktop from one codebase. Contract signing is electronic and tracked separately from payment. Clients own the source code, repo access, deployment path, and long-term roadmap. Signed contract + cleared payment are both required before repo unlock. GitHub username is collected for automatic private-repo delivery.

SIGNING AND PAYMENT FLOW

COMMUNITY GIVING

Service payments go to Origina Ventures; separate donations follow a separate flow. 10% of Origina Ventures net profits are reserved for church and community giving. No charitable tax receipt is promised unless a qualified recipient is explicitly identified. Donation reporting can be published annually for partners and sponsors.
