ABOUT ORIGNAGTA

Custom ecommerce and mobile app platform built on Flutter, Rust, and PostgreSQL. Homepage tier cards lead directly to Stripe Checkout in CAD. Cross-platform from day one: web, iOS, Android, and desktop from one codebase. No contract-signing detour in the public site flow. Clients own the source code, repo access, deployment path, and long-term roadmap. App delivery and onboarding happen after verified payment. Support contact stays visible before and after checkout.

BUYER FLOW

WHY CLIENTS BUY

Faster than agency procurement for early-stage launches. More ownership than Shopify-style platform dependence. Clear tiering: code, launch, or embedded team support. Cross-platform delivery without rebuying the product per channel.
